Windows 11 Help on 'CHDIR' command

C:\>HELP CHDIR

Displays the name of or changes the current directory.

CHDIR [/D] [drive:][path]

CHDIR [..]

CD [/D] [drive:][path]

CD [..]

  ..   Specifies that you want to change to the parent directory.

Type CD drive: to display the current directory in the specified drive.

Type CD without parameters to display the current drive and directory.

Use the /D switch to change current drive in addition to changing current

directory for a drive.

If Command Extensions are enabled CHDIR changes as follows:

The current directory string is converted to use the same case as

the on disk names. So CD C:\TEMP would actually set the current

directory to C:\Temp if that is the case on disk.

CHDIR command does not treat spaces as delimiters, so it is possible to

CD into a subdirectory name that contains a space without surrounding

the name with quotes. For example:

```
cd \winnt\profiles\username\programs\start menu
```

is the same as:

```
cd "\winnt\profiles\username\programs\start menu"
```

which is what you would have to type if extensions were disabled.
