Windows 11 Help on 'COPY' command

C:\>HELP COPY

Copies one or more files to another location.

COPY [/D] [/V] [/N] [/Y | /-Y] [/Z] [/L] [/A | /B] source [/A | /B]

   [+ source [/A | /B] [+ ...]] [destination [/A | /B]]

  source   Specifies the file or files to be copied.

  /A   Indicates an ASCII text file.

  /B   Indicates a binary file.

  /D   Allow the destination file to be created decrypted

  destination Specifies the directory and/or filename for the new file(s).

  /V   Verifies that new files are written correctly.

  /N   Uses short filename, if available, when copying a file with a

        non-8dot3 name.

  /Y   Suppresses prompting to confirm you want to overwrite an

        existing destination file.

  /-Y   Causes prompting to confirm you want to overwrite an

        existing destination file.

  /Z   Copies networked files in restartable mode.

  /L   If the source is a symbolic link, copy the link to the target

        instead of the actual file the source link points to.

The switch /Y may be preset in the COPYCMD environment variable.

This may be overridden with /-Y on the command line. Default is

to prompt on overwrites unless COPY command is being executed from

within a batch script.

To append files, specify a single file for destination, but multiple files for source (using wildcards or file1+file2+file3 format).
