Windows 11 Help on 'MKDIR' command

C:\>HELP MKDIR

Creates a directory.

MKDIR [drive:]path

MD [drive:]path

If Command Extensions are enabled MKDIR changes as follows:

MKDIR creates any intermediate directories in the path, if needed.

For example, assume \a does not exist then:

```
mkdir \a\b\c\d
```

is the same as:

```
mkdir \a
```

```
chdir \a
```

```
mkdir b
```

```
chdir b
```

```
mkdir c
```

```
chdir c
```

```
mkdir d
```

which is what you would have to type if extensions were disabled.
