Windows 11 Help on 'MOVE' command

C:\>HELP MOVE

Moves files and renames files and directories.

To move one or more files:

MOVE [/Y | /-Y] [drive:][path]filename1[,...] destination

To rename a directory:

MOVE [/Y | /-Y] [drive:][path]dirname1 dirname2

  [drive:][path]filename1 Specifies the location and name of the file

            or files you want to move.

  destination   Specifies the new location of the file. Destination

            can consist of a drive letter and colon, a

            directory name, or a combination. If you are moving

            only one file, you can also include a filename if

            you want to rename the file when you move it.

 [drive:][path]dirname1 Specifies the directory you want to rename.

  dirname2   Specifies the new name of the directory.

  /Y   Suppresses prompting to confirm you want to

            overwrite an existing destination file.

  /-Y   Causes prompting to confirm you want to overwrite

            an existing destination file.

The switch /Y may be present in the COPYCMD environment variable.

This may be overridden with /-Y on the command line. Default is

to prompt on overwrites unless MOVE command is being executed from

within a batch script.
