### ***Windows 11 Help on 'PATH' command***

#### ***C:\>HELP PATH***

Displays or sets a search path for executable files.

PATH [[drive:]path[;...];;%PATH%]

PATH ;

Type PATH ; to clear all search-path settings and direct cmd.exe to search only in the current directory.

Type PATH without parameters to display the current path.

Including %PATH% in the new path setting causes the old path to be appended to the new setting.
