NAME
Debian::DictionariesCommon.pm − dictionaries−common library

SYNOPSIS
```
use Debian::DictionariesCommon q(:all)
$dictionaries = parseinfo ('/var/lib/dictionaries-common/ispell/iwolof');
loaddb ('ispell')
updatedb ('wordlist')
```

DESCRIPTION
Common functions for use from the dictionaries-common system.

CALLING FUNCTIONS
`dico_checkroot`
> Check for rootness and fail if not.

`build_emacsen_support`
> Put info from dicts info files into emacsen−ispell−dicts.el

`build_jed_support`
> Put info from dicts info files into jed−ispell−dicts.sl

`build_squirrelmail_support`
> Build support file for squirrelmail with a list of available dictionaries and associated spellchecker calls, in php format.

`$libdir = getlibdir($class)`
> Return info dir for given class.

`$default = dico_getsysdefault($class)`
> Return system default value for given class.

`$libdir = getuserdefault`
> Return value for user default ispell dictionary.

`dico_get_spellchecker_params($class,\%language)`
> Get right params for `$class` (currently unused) and `$language`

`\%dictionaries = loaddb($class)`
> Read class .db file and return a reference to a hash with its contents.

`\%result = parseinfo($file)`
> Parse given info file and return a reference to a hash with the relevant data.

`setsysdefault($value)`
> Set value for system default ispell dictionary.

`setuserdefault`
> Set value for user default ispell dictionary, after asking to select it from the available values.

`updatedb($class)`
> Parse info files for given class and update class .db file under dictionaries-common cache dir.
