

**NAME**

Dpkg::Control::Tests – parse files like `debian/tests/control`

**DESCRIPTION**

It provides an object to access data of files that follow the same syntax as *debian/tests/control*.

**METHODS**

All the methods of Dpkg::Index are available. Those listed below are either new or overridden with a different behavior.

`$c = Dpkg::Control::Tests->new(%opts)`

Create a new Dpkg::Control::Tests object, which inherits from Dpkg::Index.

`$item = $tests->new_item()`

Creates a new item.

**CHANGES****Version 1.00 (dpkg 1.18.8)**

Mark the module as public.
