NAME

Dpkg::Control::Tests::Entry − represents a test suite entry

DESCRIPTION

This object represents a test suite entry.

METHODS

All the methods of Dpkg::Control are available. Those listed below are either new or overridden with a different behavior.

$entry = Dpkg::Control::Tests::Entry−>**new()**

Creates a new object. It does not represent a real control test entry until one has been successfully parsed or built from scratch.

$entry−>parse($fh, $desc)

Parse a control test entry from a filehandle. When called multiple times, the parsed fields are accumulated.

Returns true if parsing was a success.

CHANGES

Version 1.00 (dpkg 1.18.8)

Mark the module as public.
