

NAME

Font::TTF::Cvt_ – Control Value Table in a TrueType font

DESCRIPTION

This is a minimal class adding nothing beyond a table, but is a repository for cvt type information for those processes brave enough to address hinting.

INSTANCE VARIABLES

`val` This is an array of CVT values. Thus access to the CVT is via:

```
$f->{ 'cvt_' } { 'val' } [$num];
```

METHODS**`$t->read`**

Reads the CVT table into both the tables ' `dat` ' variable and the `val` array.

`$t->update`

Updates the RAM file copy ' `dat` ' to be the same as the array.

BUGS

None known
