

**NAME**

Font::TTF::LTSH – Linear Threshold table

**DESCRIPTION**

Holds the linear threshold for each glyph. This is the ppem value at which a glyph's metrics become linear. The value is set to 1 if a glyph's metrics are always linear.

**INSTANCE VARIABLES**

`glyphs`

An array of ppem values. One value per glyph

**METHODS**

`$t->read`

Reads the table

`$t->out($fh)`

Outputs the LTSH to the given fh.

`$t->minsize()`

Returns the minimum size this table can be. If it is smaller than this, then the table must be bad and should be deleted or whatever.

**BUGS**

None known
