NAME
Lintian::Processable::Fields::Files – Lintian interface to .buildinfo or changes file data collection

SYNOPSIS
```
use Moo;

with 'Lintian::Processable::Fields::Files';
```

DESCRIPTION
Lintian::Processable::Fields::Files provides an interface to data for .buildinfo and changes files. It implements data collection methods specific to .buildinfo and changes files.

INSTANCE METHODS
files

Returns a reference to a hash containing information about files listed in the .buildinfo file. Each hash may have the following keys:

name

Name of the file.

size

The size of the file in bytes.

section

The archive section to which the file belongs.

priority

The priority of the file.

checksums

A hash with the keys being checksum algorithms and the values themselves being hashes containing

sum

The result of applying the given algorithm to the file.

filesize

The size of the file as given in the .buildinfo section relating to the given checksum.
