

## NAME

X11::Protocol::Connection::INETSocket – Perl module for IO::Socket::INET-based X11 connections

## SYNOPSIS

```
use X11::Protocol;
use X11::Protocol::Connection::INETSocket;
$conn = X11::Protocol::Connection::INETSocket
    ->open($host, $display_number);
$x = X11::Protocol->new($conn);
```

## DESCRIPTION

This module is used by X11::Protocol to establish a connection and communicate with a server over a TCP/IP connection, using the IO::Socket::INET module.

## AUTHOR

Stephen McCamant <SMCCAM@cpan.org>.
