

NAME

X11::Protocol::Ext::BIG_REQUESTS – Perl module for the X11 protocol Big Requests extension

SYNOPSIS

```
use X11::Protocol;  
$x = X11::Protocol->new($ENV{'DISPLAY'});  
$x->init_extension('BIG_REQUESTS') or die;
```

DESCRIPTION

This module is used by the X11::Protocol module to participate in the 'Big Requests' extension to the X protocol. Once initialized, it transparently allows requests of more than 262140 (65535 * 4) bytes. The new maximum request length is available as `$x->maximum_request_length`.

AUTHOR

Stephen McCamant <SMCCAM@cpan.org>.
