NAME

XML::LibXML::CDATASection − XML::LibXML Class for CDATA Sections

SYNOPSIS

```
use XML::LibXML;
# Only methods specific to CDATA nodes are listed here,
# see the XML::LibXML::Node manpage for other methods

$node = XML::LibXML::CDATASection->new( $content );
```

DESCRIPTION

This class provides all functions of XML::LibXML::Text, but for CDATA nodes.

METHODS

The class inherits from XML::LibXML::Node. The documentation for Inherited methods is not listed here.

Many functions listed here are extensively documented in the DOM Level 3 specification (<http://www.w3.org/TR/DOM−Level−3−Core/>). Please refer to the specification for extensive documentation.

new

```
$node = XML::LibXML::CDATASection->new( $content );
```

The constructor is the only provided function for this package. It is required, because *libxml2* treats the different text node types slightly differently.
