NAME

      XtAppGetErrorDatabase, XtAppGetErrorDatabaseText − obtain error database

SYNTAX

      XrmDatabase *XtAppGetErrorDatabase(XtAppContext *app_context*);

      void XtAppGetErrorDatabaseText(XtAppContext *app_context*, char **name*, char **type*, char **class*, char
            *default, char **buffer_return*, int *nbytes*, XrmDatabase *database*);

ARGUMENTS

app_context	Specifies the application context.
buffer_return	Specifies the buffer into which the error message is to be returned.
class	Specifies the resource class of the error message.
database	Specifies the name of the alternative database that is to be used or NULL if the application's database is to be used.
default	Specifies the default message to use.
name	
type	Specifies the name and type that are concatenated to form the resource name of the error message.
nbytes	Specifies the size of the buffer in bytes.

DESCRIPTION

      The **XtAppGetErrorDatabase** function returns the address of the error database. The Intrinsics do a lazy binding of the error database and do not merge in the database file until the first call to **XtAppGetError-DatbaseText**.

      The **XtAppGetErrorDatabaseText** returns the appropriate message from the error database or returns the specified default message if one is not found in the error database.
