NAME

avahi-resolve – Resolve one or more mDNS/DNS host name(s) to IP address(es) (and vice versa) using the Avahi daemon

SYNOPSIS

```
avahi-resolve --name host-name ...
avahi-resolve-host-name host-name ...
```

 $\textbf{avahi-resolve --address} \ address \ address \ ...$

avahi-resolve-address address ...

DESCRIPTION

Resolve one or more mDNS/DNS host name(s) to IP address(es) (and vice versa) using the Avahi daemon.

OPTIONS

When passing -n, specify one or more fully qualified mDNS/DNS host name(s) (e.g. "foo.local") to resolve into IP addresses on the command line. When passing -a, specify one or more IP address to resolve into host names.

avahi-resolve-host-name is equivalent to avahi-resolve --name.

avahi-resolve-address is equivalent to avahi-resolve --address.

-n | --name

Translate one or more fully qualified host names into addresses.

-a | --address

Translate one or more addresses into fully qualified host names.

-v | --verbose

Enable verbose mode.

- **-6** When resolving a host name, look for IPv6 addresses exclusively.
- **-4** When resolving a host name, look for IPv4 addresses exclusively.

-h | --help

Show help.

-V | --version

Show version information.
