NAME

btattach - attach serial devices to BlueZ stack

SYNOPSIS

```
btattach [-B device] [-A device] [-P protocol] [-R]
```

DESCRIPTION

btattach is used to attach a serial UART to the Bluetooth stack as a transport interface.

OPTIONS

−B *device*, **−-bredr** *device*

Attach a BR/EDR controller.

-A device, --amp device

Attach an AMP controller.

-P protocol, --protocol protocol

Specify the protocol type for talking to the device. Supported values are:

- h4
- bcsp
- 3wire
- h4ds
- II
- ath3k
- intel
- bcm
- qca
- **-R** Set the device into raw mode (the kernel and bluetoothd will ignore it).
