NAME
        bundle−platform − Displays platform compatibility information

SYNOPSIS
        bundle platform [−−ruby]

DESCRIPTION
        platform will display information from your Gemfile, Gemfile.lock, and Ruby VM about your platform.

        For instance, using this Gemfile(5):

```
source "https://rubygems.org"

ruby "1.9.3"

gem "rack"
```

        If you run **bundle platform** on Ruby 1.9.3, it will display the following output:

```
Your platform is: x86_64−linux

Your app has gems that work on these platforms:
* ruby

Your Gemfile specifies a Ruby version requirement:
* ruby 1.9.3

Your current platform satisfies the Ruby version requirement.
```

        platform will list all the platforms in your **Gemfile.lock** as well as the **ruby** directive if applicable from your Gemfile(5). It will also let you know if the **ruby** directive requirement has been met. If **ruby** directive doesn´t match the running Ruby VM, it will tell you what part does not.

OPTIONS
        −−ruby
            It will display the ruby directive information, so you don´t have to parse it from the Gemfile(5).
