

NAME

codepage – extract a codepage from an MSDOS codepage file

SYNOPSIS

codepage [*-c*] [[*-l*] | *-L*] [[*-a* | *nnn*] <*file.cpi*>

DESCRIPTION

The **codepage** command extracts codepages from an MSDOS codepage file.

OPTIONS

- c* Input file is a single codepage

- L* Print header info (you don't want to see this).

- l* List all codepages contained in the file.

- a* Extract all codepages from the file

- nnn* (3 digits): extract codepage *nnn* from the file.

EXAMPLE

To create a file 850.cp, with codepage 850 from a file ega.cpi, execute:

```
codepage ega.cpi 850
```
