NAME

default.pa – PulseAudio Sound Server Startup Script

SYNOPSIS

~/.config/pulse/default.pa

/etc/pulse/default.pa

/etc/pulse/system.pa

DESCRIPTION

The PulseAudio sound server interprets a configuration script on startup, which is mainly used to define the set of modules to load. When PulseAudio runs in the per-user mode and *~/.config/pulse/default.pa* exists, that file is used. When PulseAudio runs in the per-user mode and that file doesn't exist, */etc/pulse/default.pa* is used. When PulseAudio runs as a system service, */etc/pulse/system.pa* is used.

The script should contain directives in the PulseAudio CLI language, as documented in **pulse-cli-syntax(5)**.
