

NAME

`distro-info` – provides information about the distributions' releases

SYNOPSIS

`distro-info` [*OPTIONS*]

DESCRIPTION

distro-info is a symlink to the `distro-info` command for your distribution. On Debian it links to **debian-distro-info** and on Ubuntu it links to **ubuntu-distro-info**. All options described in this manual page are available in all **distro-info** commands. All other options, which are not described here, are distribution specific.

OPTIONS

--date=DATE

date for calculating the version (default: today)

-h, --help

display help message and exit

-a, --all

list all known versions

-y[MILESTONE], --days[=MILESTONE]

display number of days until specified version reaches the specified milestone. *MILESTONE* may be one of *created*, *release*, *eol*, or *eol-server*. If no milestone is specified, assume *release*. For options that return a list, display the normal output followed by whitespace and the number of days until the specified milestone.

-d, --devel

latest development version

--series=SERIES

series to calculate the version for

-s, --stable

latest stable version

--supported

list of all supported stable versions

--unsupported

list of all unsupported stable versions

-c, --codename

print the codename (default)

-r, --release

print the release version

-f, --fullname

print the full name

SEE ALSO

debian-distro-info(1), **ubuntu-distro-info(1)**
