

NAME

dmmp_path_blk_name_get – Retrieve block name.

SYNOPSIS

```
const char * dmmp_path_blk_name_get (struct dmmp_path *dmmp_p);
```

ARGUMENTS

dmmp_p Pointer of 'struct dmmp_path'. If this pointer is NULL, your program will be terminated by assert.

DESCRIPTION

Retrieve block name of certain path. The example of block names are "sda", "nvme0n1".

RETURN

const char *. No need to free this memory, the resources will get freed when **dmmp_mpath_array_free**.
