

NAME

`getusershell`, `setusershell`, `endusershell` – get permitted user shells

SYNOPSIS

```
#include <unistd.h>
char *getusershell(void);
void setusershell(void);
void endusershell(void);
```

Feature Test Macro Requirements for glibc (see **feature_test_macros(7)**):

getusershell(), **setusershell()**, **endusershell()**:

Since glibc 2.21:

`_DEFAULT_SOURCE`

In glibc 2.19 and 2.20:

`_DEFAULT_SOURCE || (_XOPEN_SOURCE && _XOPEN_SOURCE < 500)`

Up to and including glibc 2.19:

`_BSD_SOURCE || (_XOPEN_SOURCE && _XOPEN_SOURCE < 500)`

DESCRIPTION

The **getusershell()** function returns the next line from the file `/etc/shells`, opening the file if necessary. The line should contain the pathname of a valid user shell. If `/etc/shells` does not exist or is unreadable, **getusershell()** behaves as if `/bin/sh` and `/bin/csh` were listed in the file.

The **setusershell()** function rewinds `/etc/shells`.

The **endusershell()** function closes `/etc/shells`.

RETURN VALUE

The **getusershell()** function returns NULL on end-of-file.

FILES

`/etc/shells`

ATTRIBUTES

For an explanation of the terms used in this section, see **attributes(7)**.

Interface	Attribute	Value
getusershell() , setusershell() , endusershell()	Thread safety	MT-Unsafe

CONFORMING TO

4.3BSD.

SEE ALSO
