NAME

gslp − Format and print text using ghostscript

gsbj − Format and print text for BubbleJet printer using ghostscript

gsdj − Format and print text for DeskJet printer using ghostscript

gsdj500 − Format and print text for DeskJet 500 BubbleJet using ghostscript

gslj − Format and print text for LaserJet printer using ghostscript

SYNOPSIS

gslp −12BclqRr −b<header> −f<font> −F<hfont> −L<lines> −p<outfile> −T<n>
−−add−to−space <units> −−add−to−width <units> −−columns <n> −−detect −−first−page <n>
−−kern <file.afm> −−last−page <n> −−(heading|footing)−(left|center|right) <string> −−mar-
gin−(top|bottom|left|right) <inches> −−no−eject−(file|formfeed) −−spacing <n> [gs options] [files]

gsbj [options] [files]

gsdj [options] [files]

gsdj500 [options] [files]

gslj [options] [files]

DESCRIPTION

This utility provides functionality approximately equivalent to the Unix **enscript**(1) program. It prints
plain text files using a single font. It currently handles tabs and formfeeds, but not backspaces. It will line-
wrap when using fixed-pitch fonts. It will also do kerning and width adjustment.

The default device (−sDEVICE=) and resolution (−r) are as follows:

```
gslp      epson     180
gsbj      bj10e     180
gsdj      deskjet   300
gsdj500   djet500   300
gslj      laserjet  300
```

By default the current date is formatted as the center header.

OPTIONS

Standard switches implemented:

-12BclqRr -b<header> -f<font> -F<hfont> -L<lines> -p<outfile>

Sun switches implemented:

-T<n>   set tab width

Switches ignored:

-GghKkmow -# -C -d -J -n -P -S -s -t -v

Switches added:

--add-to-space <units>

add the given number of 1/72" units to the width of each space (may be negative)

--add-to-width <units>

add the given number of 1/72" units to the width of each character (may be negative)

--columns <n>

print in <n> columns

--detect   treat the file as PostScript if it starts with %!

--first-page <n>

start printing at page <n>

--kern <file.afm>

kern using information from the given .AFM file

--last-page <n>

stop printing after page <n>

--(heading|footing)-(left|center|right) <string>
>   set the heading/footing fields; use -B first to clear

--margin-(top|bottom|left|right) <inches>
>   set a margin

--no-eject-(file|formfeed)
>   end-of-file/FF only starts a new column, not a new sheet

--spacing <n>
>   use double (n=2), triple (n=3), etc. spacing

Also, the string %# in a heading or footing is replaced with the page #.
