NAME
    mmroff − cross-reference preprocessor for GNU roff mm macro package

SYNOPSIS
    mmroff [**−x**] *groff-arguments*

DESCRIPTION
    mmroff is a simple preprocessor for *groff*, used for expanding cross references in *mm*; see *groff_mm*(7). *groff* is executed twice, first with **−z** and **−rRef=1** to collect all cross references and then to do the real processing when the cross-reference file is up to date.

OPTIONS
    −x   Just create the cross-reference file. This can be used to refresh the cross-reference file; it isn't always needed to have accurate cross references and by using this option *groff* will only be run once.

AUTHORS
    mmroff was written by Jörgen Hägg ⟨jh@axis.se⟩ of Lund, Sweden.
