NAME
>   msguniq − unify duplicate translations in message catalog

SYNOPSIS
>   **msguniq** [*OPTION*] [*INPUTFILE*]

DESCRIPTION
>   Unifies duplicate translations in a translation catalog. Finds duplicate translations of the same message ID.
>   Such duplicates are invalid input for other programs like msgfmt, msgmerge or msgcat. By default, dupli-
>   cates are merged together. When using the **−−repeated** option, only duplicates are output, and all other
>   messages are discarded. Comments and extracted comments will be cumulated, except that if **−−use−first**
>   is specified, they will be taken from the first translation. File positions will be cumulated. When using the
