

NAME

`mtrace` – interpret the malloc trace log

SYNOPSIS

`mtrace` [*option*]... [*binary*] *mtracedata*

DESCRIPTION

mtrace is a Perl script used to interpret and provide human readable output of the trace log contained in the file *mtracedata*, whose contents were produced by **mtrace(3)**. If *binary* is provided, the output of **mtrace** also contains the source file name with line number information for problem locations (assuming that *binary* was compiled with debugging information).

For more information about the **mtrace(3)** function and **mtrace** script usage, see **mtrace(3)**.

OPTIONS

--help Print help and exit.

--version

Print version information and exit.

BUGS

For bug reporting instructions, please see: <http://www.gnu.org/software/libc/bugs.html>.
