NAME
>   nm−applet − network monitor and control GUI applet

SYNOPSIS
>   **nm−applet** [*OPTIONS*]

DESCRIPTION
>   **nm−applet** is a GTK-based GUI applet to monitor network status and devices and to start and stop network
>   connections managed by NetworkManager. *nm−applet* is normally started at login by the desktop session
>   manager and does not need to be run manually. *nm−applet* conforms to the XDG System Tray specifica-
>   tion and requires that the desktop environment provide a System Tray implementation in which the applet
>   will be embedded.
