NAME

nmtui - Text User Interface for controlling NetworkManager

SYNOPSIS

```
nmtui-edit | nmtui edit {name | id}
nmtui-connect | nmtui connect {name | uuid | device | SSID}
nmtui-hostname | nmtui hostname
```

DESCRIPTION

nmtui is a curses-based TUI application for interacting with NetworkManager. When starting **nmtui**, the user is prompted to choose the activity to perform unless it was specified as the first argument.

The supported activities are:

edit

Show a connection editor that supports adding, modifying, viewing and deleting connections. It provides similar functionality as **nm–connection–editor**.

connect

Show a list of available connections, with the option to activate or deactivate them. It provides similar functionality as **nm-applet**.

hostname

Set the system hostname.

Corresponding to above activities, **nmtui** also comes with binaries named **nmtui–edit**, **nmtui–connect**, and **nmtui–hostname** to skip the selection of the activities.
