

**NAME**

pastebinit – command–line pastebin client

**SYNOPSIS**

**pastebinit** [**-abfhiljmrtup**]

**DESCRIPTION**

This manual page documents briefly the **pastebinit** commands

**pastebinit** reads text and sends it to a "pastebin" on the internet, returning the URL to the user.

It allows the text to be passed through a pipe (|) or from files as arguments.

**OPTIONS****Optional arguments (not supported by all pastebins)**

- a** [**author**] (default: \$USER)
- b** [**pastebin url**] (default is distro–specific with a fallback to pastebin.com)
- E** Print the content to stdout too
- f** [**format for syntax–highlighting**] (default: text) (check pastebin's website for complete list, example: python)
- h** Help screen
- i** [**filename**] Use filename for input
- l** List all the supported pastebins
- j** [**jabberid**] (default: none)
- m** [**permatag**] (default: none)
- t** [**title of paste**] (default: none)
- P** [**private**] (default: 1)
- u** [**username**] (default: none)
- p** [**password**] (default: none)
- v** Version number

**CONFIGURATION FILE**

If a .pastebinit.xml file is found in the user's home directory, pastebinit will use it for its configuration.

Here's an example file:

```
<pastebinit>
  <pastebin>https://paste.ubuntu.com</pastebin>
  <author>Stephane Graber</author>
  <jabberid>stgraber@stgraber.org</jabberid>
  <format>text</format>
</pastebinit>
```

**AUTHORS**

Pastebinit is currently written by Stephane Graber.

username, password, format, title, arguments and redirect support added by Daniel Bartlett.
