NAME

    pfbtops − translate Printer Font Binary files to PostScript ASCII

SYNOPSIS

    pfbtops [*pfb-file*]

    pfbtops −−help

    pfbtops −v
    pfbtops −−version

DESCRIPTION

    pfbtops translates a PostScript font in Printer Font Binary (PFB) format to ASCII, splitting overlong lines in text packets into smaller chunks. If *pfb-file* is omitted, the PFB file will be read from the standard input. The ASCII format PostScript font will be written on the standard output. PostScript fonts for MS-DOS are normally supplied in PFB format.

    The resulting ASCII format PostScript font can be used with groff, if it is first listed in */usr/share/groff/ 1.22.4/font/devps/download* and */usr/share/groff/1.22.4/font/devpdf/download*.

OPTIONS

    −−help Display a usage message and exit.

    −v
    −−version
        Display version information and exit.
