NAME
plymouthd − The plymouth daemon

SYNOPSIS
plymouthd [OPTION...]

DESCRIPTION
The **plymouthd** daemon is usually run out of the initrd. It does the heavy lifting of the plymouth system, logging the session and showing the splash screen.

The **plymouth** is used to send commands to plymouthd that control its behaviour.

OPTIONS
The following options are understood:

−−help
> Show summary of options.

−−attach−to−session
> Redirect console messages from screen to log.

−−no−daemon
> Do not daemonize.

−−debug
> Output debugging information.

−−debug−file=STRING
> File to write debugging information to.

−−mode=MODE
> Set mode to either boot or shutdown.

−−pid−file=STRING
> Write the PID of the daemon to a file.

−−kernel−command−line=STRING
> Fake kernel commandline to use.

−−tty=STRING
> TTY to use instead of default.
