

**NAME**

pnmtowd - convert a portable anymap into an X11 window dump

**SYNOPSIS**

**pnmtowd** [-pseudodepth *n*] [-directcolor] [*pnmfile*]

**DESCRIPTION**

Reads a portable anymap as input. Produces an X11 window dump as output. This window dump can be displayed using the `xwud` tool.

Normally, `pnmtowd` produces a StaticGray dump file for *pbm* and *pgm* files. For *ppm*, it writes a PseudoColor dump file if there are up to 256 colors in the input, and a DirectColor dump file otherwise. The **-directcolor** flag can be used to force a DirectColor dump. And the **-pseudodepth** flag can be used to change the depth of PseudoColor dumps from the default of 8 bits / 256 colors.
