NAME

podselect − print selected sections of pod documentation on standard output

SYNOPSIS

podselect [**−help**] [**−man**] [**−section***section-spec*] [*file*...]

OPTIONS AND ARGUMENTS

−help Print a brief help message and exit.

−man Print the manual page and exit.

−section*section-spec*

  Specify a section to include in the output. See ''SECTION SPECIFICATIONS'' in Pod::Parser for the format to use for *section-spec*. This option may be given multiple times on the command line.

file The pathname of a file from which to select sections of pod documentation (defaults to standard input).

DESCRIPTION

podselect will read the given input files looking for pod documentation and will print out (in raw pod format) all sections that match one ore more of the given section specifications. If no section specifications are given than all pod sections encountered are output.

podselect invokes the **podselect()** function exported by **Pod::Select** Please see ''**podselect()**'' in Pod::Select for more details.
