

**NAME**

`rfdump` – dumps an RDOFF object in human-readable form

**SYNOPSIS**

`rfdump` [-v] <filename>

**DESCRIPTION**

`rfdump` prints a list of the header records in an RDOFF object in human-readable form, and optionally prints a hex dump of the contents of the segments.

`rfdump` supports both version 1 and 2 of RDOFF. It will give warnings if the RDOFF2 format is violated (it looks for incorrect lengths for header records, and checks the overall length count at the start of the file).

**OPTIONS**

-v       Print a hex dump of the contents of the segments.
