NAME
       regdbdump − parse and print out regulatory rules file

SYNOPSIS
       regdbdump <path-to-regulatory.bin>

Description
       regdbdump can be used to parse the **regulatory.bin** file, the Linux wireless regulatory database used by
       crda, and print out its contents in human readable format. **regdbdump** will return non zero if the digital
       signature **regdbdump** was built with cannot verify the signature of the regulatory database. Should this
       happen unintentionally chances are your regulatory.bin file is corrupted or has been tampered with.

SEE ALSO
       regulatory.bin(5) **crda**(8) **iw**(8)
