

NAME

resizepart – tell the kernel about the new size of a partition

SYNOPSIS

resizepart *device partition length*

DESCRIPTION

resizepart tells the Linux kernel about the new size of the specified partition. The command is a simple wrapper around the "resize partition" ioctl.

This command doesn't manipulate partitions on a block device.

PARAMETERS

device The disk device.

partition

The partition number.

length The new length of the partition (in 512-byte sectors).

SEE ALSO

addpart(8), delpart(8), fdisk(8), parted(8), partprobe(8), partx(8)

AVAILABILITY

The `resizepart` command is part of the `util-linux` package and is available from <https://www.kernel.org/pub/linux/utils/util-linux/>.
