

**NAME**

roff2html – transform roff code into html mode

**SYNOPSIS**

**roff2html** [*groffer-option* ...] [--] [*filespec* ...]

**roff2html -h**

**roff2html --help**

**roff2html -v**

**roff2html --version**

The options **-v** and **--version** print the version information of the program to standard output and exit. The options **-h** and **--help** print a usage information of the program to standard output and stop the program instantly.

All other options are assumed to be **groffer** options. They are internally passed to **groffer**. They override the behavior of the program. The options are optional, they can be omitted.

The *filespec* arguments correspond to the *filespec* arguments of **groffer**. So they are either the names of existing, readable files or **-** for standard input, or the name of a man page or a **groffer(1)** man page search pattern. If no *filespec* is specified standard input is assumed automatically.

**DESCRIPTION**

**roff2html** transforms *roff* code into *html* mode. Print the result to standard output.

There are more of these programs for generating other formats of *roff* input.

**roff2dvi(1)**

is for *dvi* mode.

**roff2pdf(1)**

outputs *pdf* mode.

**roff2ps(1)**

prints *PostScript* format to standard output.

**roff2text(1)**

generates text output in the **groff** device *latin1*.

**roff2x(1)**

prints the output in the **groff** device **X** that is suitable for programs like **gxditview(1)** or **xditview(1)**.

**AUTHORS**

**roff2html** was written by Bernd Warken <groff-bernd.warken-72@web.de>.
