NAME

roff2x − transform roff code into x mode

SYNOPSIS

roff2x [*groffer-option* …] [**−−**] [*filespec* …]

roff2x −h
roff2x −−help

roff2x −v
roff2x −−version

The options **−v** and **−−version** print the version information of the program to standard output and exit. The options **−h** and **−−help** print a usage information of the program to standard output and stop the program instantly.

All other options are assumed to be **groffer** options. They are internally passed to **groffer**. They override the behavior of the program. The options are optional, they can be omitted.

The *filespec* arguments correspond to the *filespec* arguments of **groffer**. So they are either the names of existing, readable files or **−** for standard input, or the name of a man page or a **groffer**(1) man page search pattern. If no *filespec* is specified standard input is assumed automatically.

DESCRIPTION

roff2x transforms *roff* code into *X* mode corresponding to the *groff* devices **X***; this mode is suitable for **gxditview**(1). Print the result to standard output.

There are more of these programs for generating other formats of *roff* input.

roff2dvi(1)
   is for *dvi* mode.

roff2html(1)
   generates *HTML* output.

roff2pdf(1)
   outputs *pdf* mode.

roff2ps(1)
   prints *PostScript* format to standard output.

roff2text(1)
   generates text output in the **groff** device *latin1*.

AUTHORS

roff2x was written by Bernd Warken ⟨groff−bernd.warken−72@web.de⟩.
