

**NAME**

`rpmdeps` – Generate RPM Package Dependencies

**SYNOPSIS**

`rpmdeps` **{-P|--provides}** **{-R|--requires}** **{--rpmfcdebug}** *FILE* ...

**DESCRIPTION**

`rpmdeps` generates package dependencies for the set of *FILE* arguments. Each *FILE* argument is searched for Elf32/Elf64, script interpreter, or per-script dependencies, and the dependencies are printed to stdout.

**SEE ALSO**

`rpm`(8),

`rpmbuild`(8),
