

**NAME**

`rtpr` – replace backslashes with newlines.

**DESCRIPTION**

**rtpr** is a trivial shell script which converts backslashes in standard input to newlines. It's sole purpose is to be fed with input from **ip** when executed with it's **--oneline** flag.

**EXAMPLES**

```
ip --oneline address show | rtpr
    Undo oneline converted ip-address output.
```
