NAME
runc−kill − send a specified signal to container

SYNOPSIS
runc kill [**−−all**|**−a**] *container−id* [*signal*]

DESCRIPTION
By default, **runc kill** sends **SIGTERM** to the container's initial process only.

A different signal can be specified either by its name (with or without the **SIG** prefix), or its numeric value. Use **kill**(1) with **−l** option to list available signals.

OPTIONS
−−all|**−a** : Send the signal to all processes inside the container.

EXAMPLES
The following will send a **KILL** signal to the init process of the **ubuntu01** container:

        # runc kill ubuntu01 KILL

SEE ALSO
runc(1).
