

**NAME**

sane-s9036 – SANE backend for Siemens 9036 flatbed scanners

**DESCRIPTION**

The **sane-s9036** library implements a SANE (Scanner Access Now Easy) backend that provides access to Siemens 9036 flatbed scanners.

**DEVICE NAMES**

This backend expects device names of the form:

*special*

Where *special* is the path-name for the special device that corresponds to a SCSI scanner. The special device name must be a generic SCSI device or a symlink to such a device. The program *sane-find-scanner* helps to find out the correct device. Under Linux, such a device name could be */dev/sga* or */dev/sge*, for example. See *sane-scsi(5)* for details.

**FILES**

@*CONFIGDIR*@/*s9036.conf*

The backend configuration file (see also description of **SANE\_CONFIG\_DIR** below).

@*LIBDIR*@/*libsane-s9036.a*

The static library implementing this backend.

@*LIBDIR*@/*libsane-s9036.so*

The shared library implementing this backend (present on systems that support dynamic loading).

**ENVIRONMENT****SANE\_CONFIG\_DIR**

This environment variable specifies the list of directories that may contain the configuration file. Under UNIX, the directories are separated by a colon (':'), under OS/2, they are separated by a semi-colon (;'). If this variable is not set, the configuration file is searched in two default directories: first, the current working directory (".") and then in @*CONFIGDIR*@. If the value of the environment variable ends with the directory separator character, then the default directories are searched after the explicitly specified directories. For example, setting **SANE\_CONFIG\_DIR** to */tmp/config:* would result in directories *tmp/config*, *.*, and *@CONFIGDIR@* being searched (in this order).

**SANE\_DEBUG\_S9036**

If the library was compiled with debug support enabled, this environment variable controls the debug level for this backend. Higher debug levels increase the verbosity of the output.

Example: `export SANE_DEBUG_S9036=4`
