NAME
       setsid − run a program in a new session

SYNOPSIS
       setsid [options] *program* [*arguments*]

DESCRIPTION
       setsid runs a program in a new session. The command calls **fork**(2) if already a process group leader. Oth-
       erwise, it executes a program in the current process. This default behavior is possible to override by the
       −−fork option.

OPTIONS
       −c, **−−ctty**
              Set the controlling terminal to the current one.

       −f, **−−fork**
              Always create a new process.

       −w, **−−wait**
              Wait for the execution of the program to end, and return the exit value of this program as the return
              value of **setsid**.

       −V, **−−version**
              Display version information and exit.

       −h, **−−help**
              Display help text and exit.
