**NAME**
>    xdriinfo − query configuration information of DRI drivers

**SYNOPSIS**
>    **xdriinfo** [−display *displayname*] [-version] [command]

**DESCRIPTION**
>    *xdriinfo* can be used to query configuration information of direct rendering drivers. If no command argument is specified it lists the names of the direct rendering drivers for all screens.
>
>    Valid options are:
>
>    **-display**
>>        Specifies X server to connect to.
>
>    **-version**
>>        Print the program version and exit.
>
>    Valid commands are:
>
>    **nscreens**
>>        Print the number of screens.
>
>    **driver** *screen*
>>        Print the name of the direct rendering driver for *screen*.
>
>    **options** *screen|driver*
>>        Print the XML document describing the configuration options of a driver. The driver can be specified directly by *driver* name or indirectly by *screen* number. If the driver name is specified directly then no X connection is needed.

**ENVIRONMENT**
>    **DISPLAY**
>>        The default display.
